Maximum Marks	3 Marks

Project Executable Files

This section lists all executable and deployable files submitted for the Personalized Networking Assistant.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA (local JSON storage, no schema required)
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA (runs locally for this submission)
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes (linked in Project Demonstration folder)

Step 2: File / Folder Structure

```
Personalized-Networking-Assistant/  
  backend/  
    main.py      - FastAPI routes  
    event_analyzer.py - Gemini theme extraction  
    topic_generator.py - Conversation starter generation + history save  
    fact_checker.py - Wikipedia fact check  
  tests/  
    test_services.py - pytest (15 passing)  
  data/  
    history.json  
    feedback.json  
  frontend.py    - Streamlit UI  
  .env           - GEMINI_API_KEY (not committed)  
  requirements.txt  
  README.md
```

Step 3: Deployment / Access Details

Hosted / Deployed URL	NA – currently run locally
Login Credentials (Demo)	NA – no authentication required
Platform / Hosting Provider	Local machine (Streamlit + FastAPI)
Repository Link	https://github.com/Asma957/Personalized-Networking-Assistant
Demo Video Link	https://drive.google.com/file/d/1LVHr5z3xhWW4ouhgW54iY-hQW0Hvz25B/view?usp=sharing

Step 4: Run Instructions

Pre-requisites: Python 3.10+, pip, a Gemini API key.

Step 1: Clone the repository: `git clone https://github.com/Asma957/Personalized-Networking-Assistant.git`

Step 2: Create/activate the virtual environment (venv2) and install dependencies: `pip install -r requirements.txt`

Step 3: Add GEMINI_API_KEY to a .env file in the project root.

Step 4: Start the backend: `cd backend && python -m uvicorn main:app --reload --port 8000`

Step 5: In a new terminal, start the frontend from the project root: `streamlit run frontend.py`

Step 6: Open the Streamlit URL shown in the terminal (typically `http://localhost:8501`).

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Gemini free-tier API quota can be exhausted during testing	Fallback starter templates in <code>topic_generator.py</code> keep the app usable
2	venv path/activation confusion between CMD and PowerShell	Documented exact activation command per shell in README
3	Accidental venv2 deletion during setup	Recreated venv2 and reinstalled dependencies from <code>requirements.txt</code>
