Coding & Solution

This section evaluates the quality and completeness of the implemented code and the overall solution for the Personalized Networking Assistant.

Solution Summary

Repository Link / URL	https://github.com/Asma957/Personalized-Networking-Assistant
Programming Language(s)	Python
Framework(s) Used	FastAPI (backend), Streamlit (frontend)
Key Features Implemented	- Event theme analysis via Gemini API - Personalized conversation-starter generation (with fallback templates) - Wikipedia-based fact-checking - Session history tracking (history.json) - User feedback capture (feedback.json) - Premium Streamlit UI (glassmorphism, gradient cards)
Pending / Incomplete Features	Cloud deployment/hosting and Docker containerization are not included in this submission; app currently runs locally.
Setup / Run Instructions	1. Clone repo and create/activate venv2 2. pip install -r requirements.txt 3. Add GEMINI_API_KEY to .env 4. cd backend && python -m uvicorn main:app --reload --port 8000 5. In a new terminal (project root): streamlit run frontend.py 6. Open http://localhost:8501

Code Quality Checklist

S.No	Criteria	Status
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments

15 pytest unit tests (backend/tests/test_services.py) all pass, covering event analysis, starter generation (including fallback path), and fact-checking logic.
