

Solution Architecture

Date	28/06/2026
Team ID	XXXX
Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Solution Architecture Diagram:

The diagram below maps the Personalized Networking Assistant onto a layered architecture: Presentation, API, Core Logic Services, and Data Storage.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Renders the UI where users input event/industry details and view generated starters, fact-checks, and history.	Streamlit
API Layer	Exposes REST endpoints that the frontend calls to trigger generation, fact-checking, and history retrieval.	FastAPI, Uvicorn

Core Logic Services	Extracts event themes, generates conversation starters, and fact-checks content.	event_analyzer.py, topic_generator.py, fact_checker.py
External API Integrations	Provides AI-generated content and factual verification via third-party services.	Google Gemini API (gemini-2.0-flash), Wikipedia API
Data / Storage Layer	Persists generated starter history and user feedback locally.	Local JSON files (history.json, feedback.json)
